Winter Storm Warning/Advisory Headlines

Weather Forecast Office
Shreveport, LA

Valid: 6 AM CST Thursday, January 9th to 12 PM Friday, January 10th

Issued January 9, 2025 4:00 AM CST

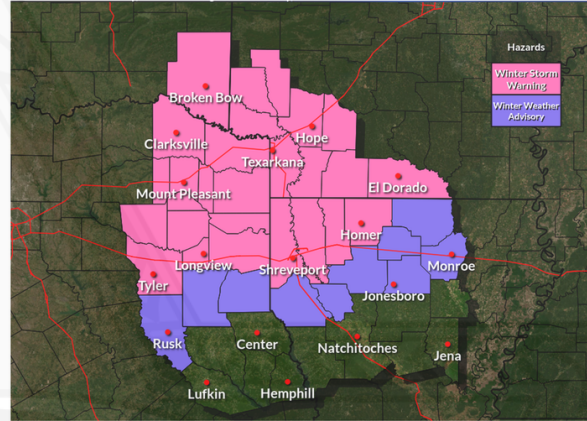

Winter Storm Warning Details

WHAT: Heavy mixed precipitation expected. Total snow accumulations between 2 and 6 inches (with locally higher amounts north of I-30), and ice accumulations up to a third of an inch.

IMPACTS: Roads, and especially bridges and overpasses, will likely become slick and hazardous. The strong winds and weight of snow on tree limbs may down power lines and could cause sporadic power outages. Plan on slippery road conditions. These hazardous road conditions could impact the Thursday evening and Friday morning commutes.

WHERE: Portions of south central and southwest Arkansas, southeast Oklahoma, northeast Texas & northwest Louisiana.

WHEN: From Thursday morning through Noon on Friday.

Winter Weather Advisory Details

- **Less accumulation** of both snow and ice, and **more uncertainty** has resulted in an advisory being issued farther south and east.
- **If confidence increases** or there is an **increase in the expected impacts**, an upgrade to a warning would be necessary.
